Project Overview

In this project, a music player with a clean and easy-to-user interface was build. It allows the user to shuffle the music, preview the music, and adjust the playlist as he or she likes. Before you start using, you need the following steps to set up.

Getting Started

npm install

This will install all modules listed as dependencies, ensuring you have the right things to play with the music player.

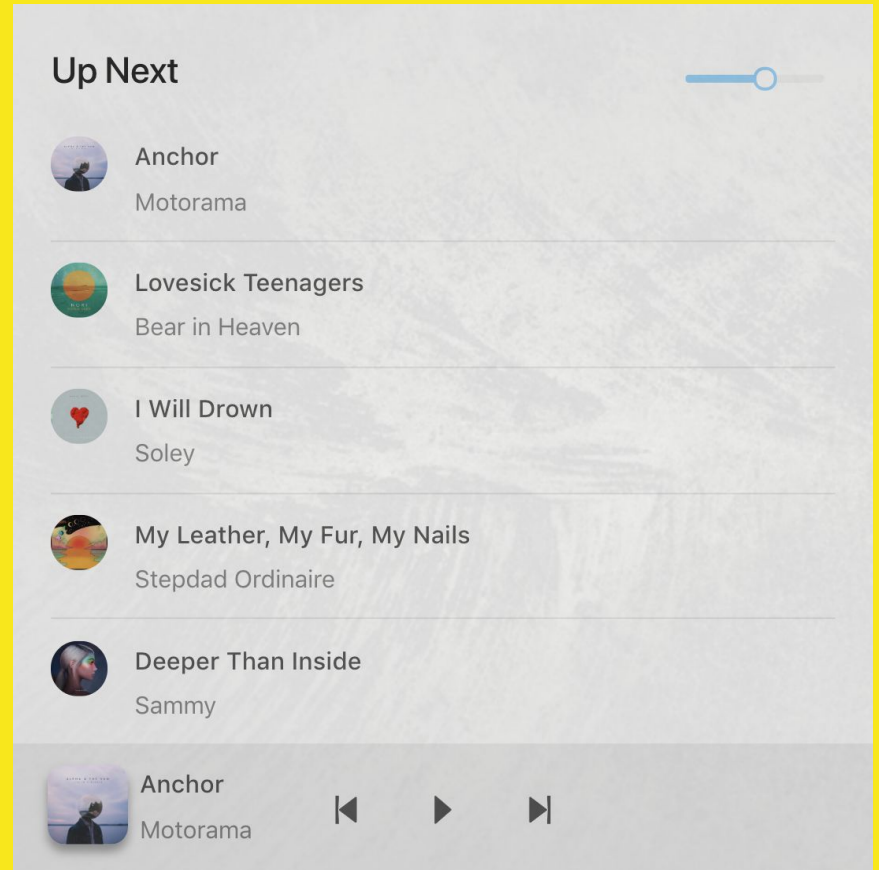

npm start

There you go! Start playing with the music player.
Open <http://localhost:3000> to view it in the browser.

Feature Highlights...

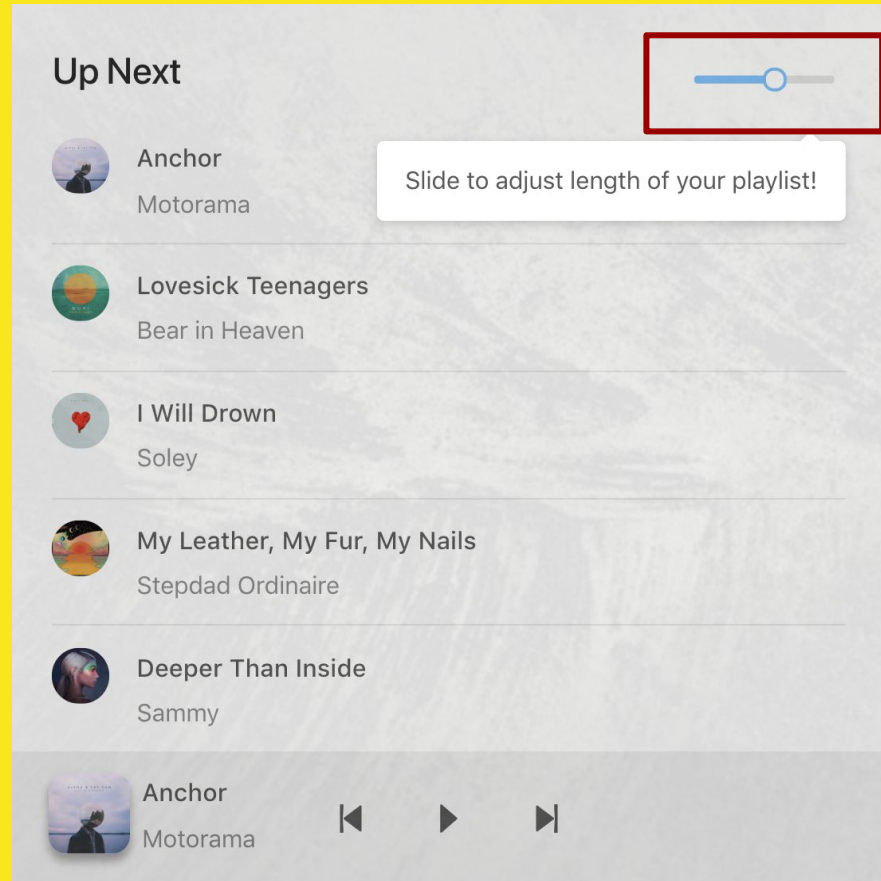

Shuffle Music

After opening the page, you can start shuffling by clicking "play" button. The songs appear in the play list are all the songs that are going to be played. They will be loaded in loops with random order. Alternatively, you can pause any music by clicking the "pause" button next to it.

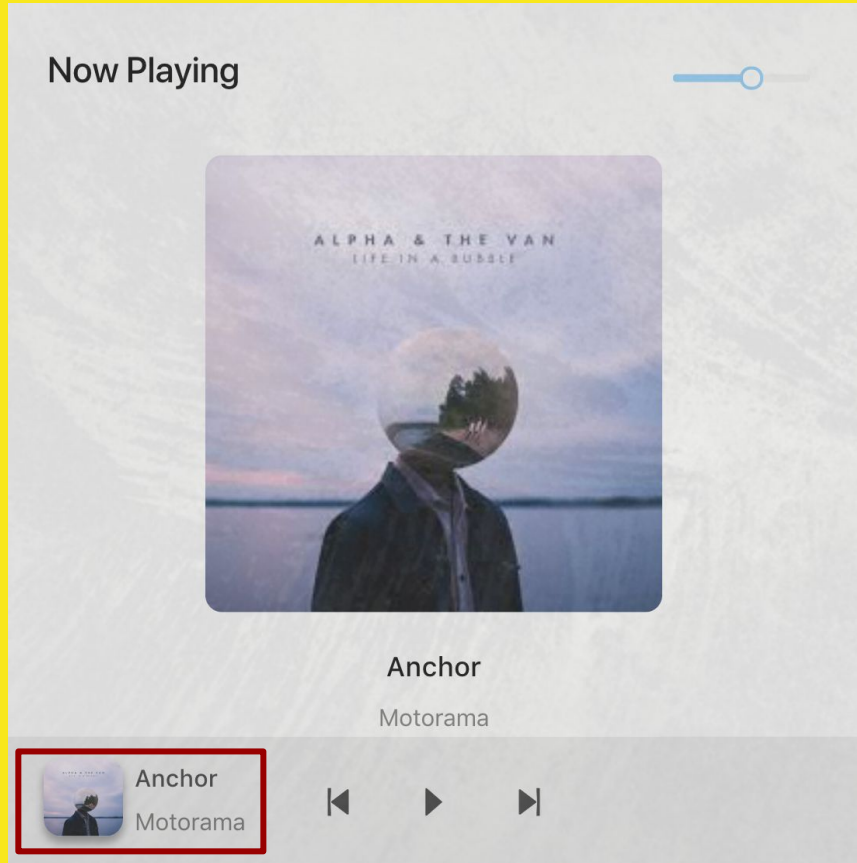

Customize Playlist

Whether the list is too short or too long for you, you can easily change its length by sliding the slider on the top right corner of the player! But don't make it too long because it is designed to be concise and simple!

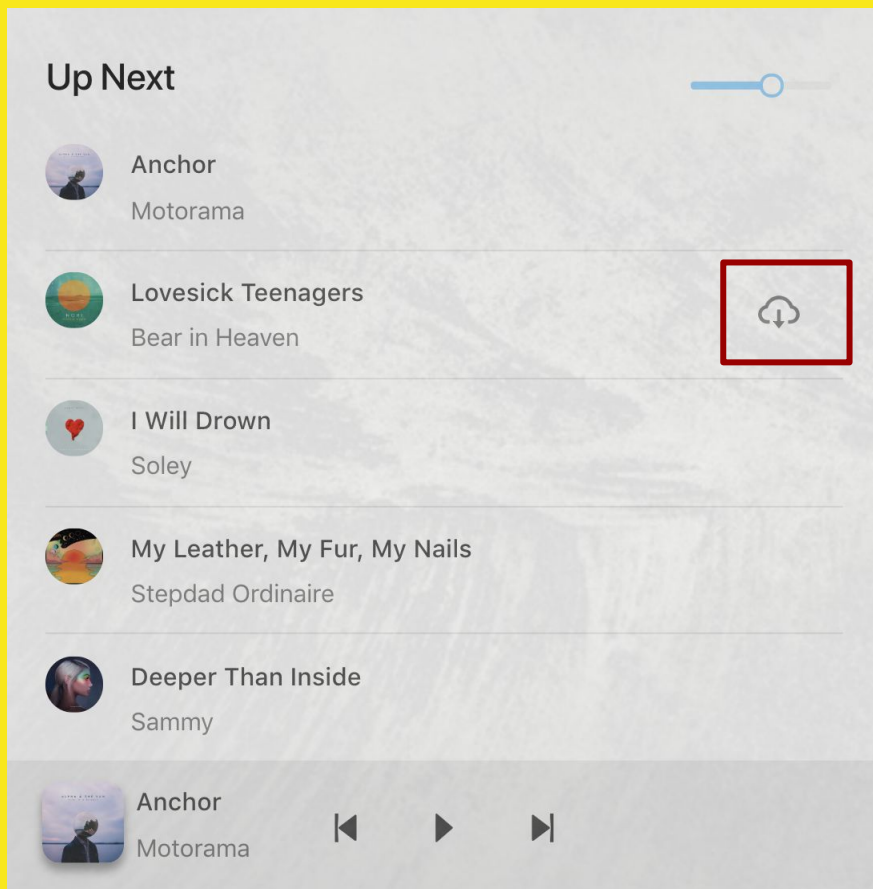

Preview Current Song

The song that is currently playing can be seen in the **left bottom** corner of the music player, with its album cover, tile and singer name displayed. **Click it**, and all the details about this song will be displayed.

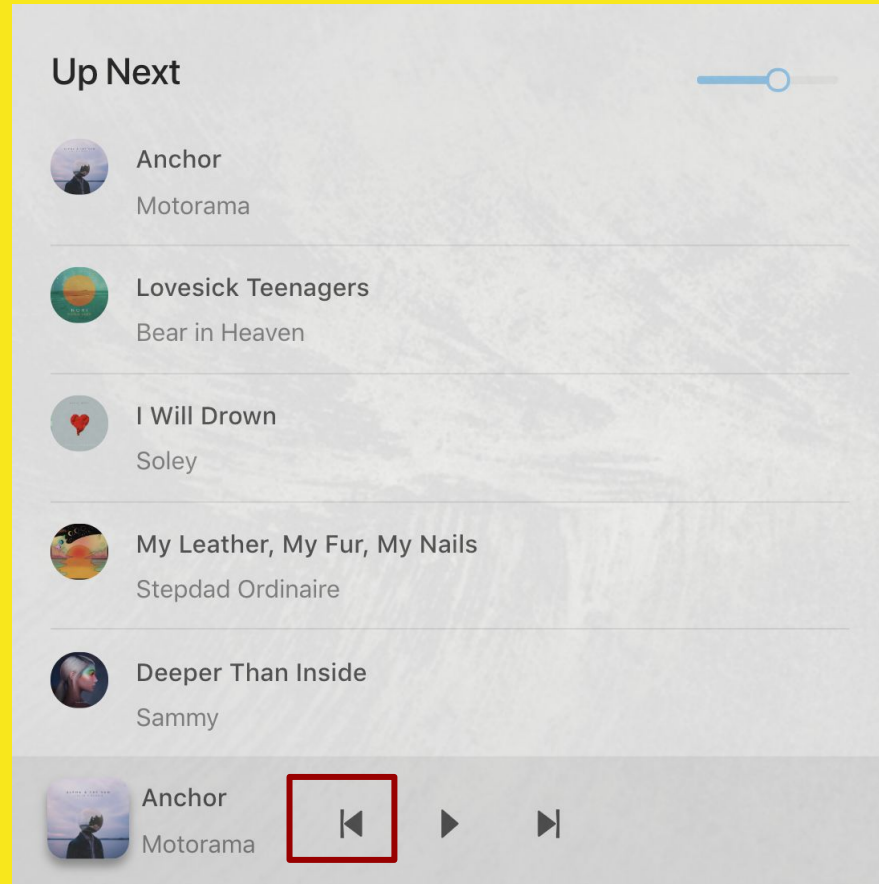

Download Music

Hover any music in the list, you will see a "download" button. Download whichever you like!

Replay

Want to play it again? Simply click the "step-backward" button which is placed left to the play button, and the song will be played again for you.

Thank you!
